This publication brings together the basic schedules of commodity classifications currently being used in the compilation and publication of U.S. foreign trade statistics. Included, for example, are the TSUSA (imports) and Schedule B (exports) classifications and their respective correlations to the categories comprising end-use commodities. Schedule A (imports) including its cross-classification to TSUSA, Schedule E (exports) which has been converted on a one-for-one basis to Schedule B, also are included, as are the individual Schedule A/E classification assignments to the item descriptions shown in the selected commodity groupings and commodity tables of Report FT 990. Each schedule of foreign trade classifications comprises a separate section of the publication.

Unless otherwise noted, the classifications in this book are those in effect January through October 1978.

Classifications
Correlated With Schedule B
and FT 990 Codes*

Section 1

This table shows the outline of Schedule E, SITC-Based Classification of Domestic and Foreign Commodities Exported from the United States, with abbreviated commodity descriptions for the 1-, 2-, 3-, and 4-digit levels of summarization. For the detailed 7-digit Schedule E classifications both abbreviated commodity descriptions and the primary unit of quantity are shown, as well as the corresponding Schedule B number and the most detailed level of the FT 990 code (see Section 4).

The basic export statistics are initially collected and compiled in accordance with the commodity classifications in Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States. Effective with the January 1978 edition of Schedule B, the export classification schedule is based on the framework of the import classification system, Tariff Schedules of the United States Annotated (TSUSA). In this table the approximately 4,500 Schedule B classifications have been converted, on a one-to-one basis, to a new classification system—Schedule E, which is based on the Standard International Trade Classification (SITC), Revision 2.¹ (Prior to January 1978, the export statistics are presented only in terms of Schedule B classifications, which were based on the former SITC, revised.)

The numbering system of Schedule E is basically the same as the SITC. Whenever Schedule E 1-, 2-, or 3-digit numbers are the same as those in the SITC, it is believed that for most statistical purposes the commodity coverage can be considered essentially comparable, although the coverage is not always identical. Reasonable comparability for statistical purposes can also be expected, in most cases, when 5-digit Schedule E numbers are identical with SITC numbers. At the 4-digit level, the retention of an SITC number in Schedule E indicates similarity of coverage but the degree of comparability may in some cases be less at the 4-digit level for identical numbers in the two systems than at the 5-digit level. When a non-SITC number is used as the second, third, fourth, or fifth digit of a Schedule E number, comparability of coverage with any given SITC classification at the same level ordinarily does not exist, but there usually will be comparability involving combinations of schedules or SITC classifications.

The sixth and seventh digits are added to provide more detailed breakdowns where such detail appears to be justified to reflect U.S. export trade characteristics. To this extent the detail shown is determined largely on the magnitude of trade in the various Schedule E commodities arranged within the SITC framework, with the two objectives of providing detailed data for commodities important in the U.S. export trade while also providing data in terms of the SITC outline which are comparable, insofar as possible, with Foreign Trade statistics compiled by other trading nations.

Section 2

This table lists the approximately 4,500 statistical classification numbers in the Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States, 1978 edition, as amended by Public Bulletin B-1, together with abbreviated commodity descriptions and, as applicable, units of quantity. Also aligned under their respective columns opposite each classification are the following additional codes used in defining Schedule B classifications in terms of the indicated statistical categories:

1. Schedule E number (7-digits) which has been established on a one-to-one basis from Schedule B, and rearranges Schedule B into Schedule E, SITC-Based Classification of Commodities Exported from the United States. Schedule E is a classification system based on the Standard International Trade Classification (SITC), Revision 2.¹
2. Agricultural and nonagricultural code (1-digit): "O" indicates agricultural commodities; "1" indicates non-agricultural.

Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Manufactured products, such as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered to be agricultural.

The above guidelines which are used to classify commodities as "agricultural" are identical to those used by the Department of Agriculture, but differ from the guidelines used in the Standard Industrial Classification (SIC) of the United States.

3. End-use code (4-digits) used for rearranging and grouping basic Schedule B export data into end-use commodity categories. Tables E-7 and E-9 of Report FT 990, Highlights of U.S. Export and Import Trade, and Tabulation EM 571, U.S. Exports in Terms of "End-Use" Commodity Categories use this classification scheme. For a correlation between end-use export classifications and Schedule B numbers, see Section 3 of this publication.

Section 3

This section shows the outline of the end-use classification scheme for recording U.S. export trade data, with the commodity description for each end-use category and the Schedule B numbers assigned to each end-use category at the most detailed level (4-digit). (See Section 2 for abbreviated Schedule B descriptions.)

The classification of U.S. export trade into broad summary commodity categories based on a concept of end-use demand was originated and developed a number of years ago by the Merchandise Trade Branch, Balance of Payments Division, Bureau of Economic Analysis (BEA). It represents a regrouping of the approximately 4,500 individual commodity numbers contained in Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States into 122 4-digit summary commodity groupings. The 4-digit coding system permits combining of the 122 groupings into broader and broader subcategories at the 3-, 2-, and 1-digit level. At the broadest (1-digit) level, the principal end-use categories of exports emerge as follows:

- 0 Food, feeds, and beverages
- 1 Industrial supplies and materials

- 2 Capital goods, except automobiles
- 3 Automotive vehicles, parts, and engines
- 4 Consumer goods (nonfood), except automotive
- 5 Special category domestic (military-type goods)
- 6 Exports, n.s.p.f. and reexports

Data for all the 122 export end-use groupings, together with the 3-, 2-, and 1-digit subcategories and categories into which they combine, are presented in tables E-7 and E-9 of Report FT 990, Highlights of U.S. Export and Import Trade, and in Tabulation EM-571, U.S. Exports of Domestic and Foreign Merchandise, "End-Use. . . ." End-use demand has fundamentally determined the assignment and regrouping of the basic Schedule B export commodity classifications into major summary categories, but within each major grouping there are subdivisions intended to reflect the physical nature of a commodity or its stage of production.

For a more complete description of the end-use system, see "U.S. Merchandise Trade Exports and Imports—1965-1976, Classified by BEA End-Use Categories."

Section 4

This section relates commodity number composition of the selected commodity groupings and commodities described in export commodity summary tables E-2, E-5, and E-6 of Report FT 990, Highlights of U.S. Export and Import Trade to the appropriate numbers in Schedule E, SITC-Based Classification of Domestic and Foreign Commodities Exported from the United States. In general, the data presented in the export commodity-oriented summary

tables include Schedule E section (1-digit) totals, selected division (2-digit), grouping (3-digit), and subgroup (4-digit) totals, and totals for leading commodities (7-digit) or combinations of commodities. (See Section 1 for abbreviated Schedule E descriptions.) The data presented in terms of these categories are intended to reflect the current pattern or highlights of U.S. export trade.

*Schedule A
Import
Classifications

and FT 990 Codes*

Section 5

This table shows the outline of Schedule A, SITC-Based Statistical Classification of Commodities Imported into the United States, with abbreviated commodity descriptions for the 1-, 2-, 3-, and 4-digit levels of summarization. For the detailed 7-digit Schedule A classifications both abbreviated commodity descriptions and unit of quantity are shown, as well as the individual TSUSA numbers which are assigned to the Schedule A classification and the most detailed level of the FT 990 code (see Section 8).

Schedule A rearranges and summarizes the approximately 10,500 commodity classifications of the Tariff Schedules of the United States Annotated (TSUSA) into approximately 3,100 7-digit Schedule A classifications within the framework of the Standard International Trade Classification (SITC), Revision 2¹, effective with the statistics for January 1978. (Prior to January 1978, Schedule A was based upon the former SITC, revised.)

The numbering system of Schedule A is basically the same as the SITC. Whenever Schedule A 1-, 2-, or 3-digit numbers are the same as those in the SITC, it is believed that for most statistical purposes the commodity coverage can be considered essentially comparable, although the coverage is not

always identical. Reasonable comparability for statistical purposes can also be expected, in most cases, when 5-digit Schedule A numbers are identical with SITC numbers. At the 4-digit level, the retention of an SITC number in Schedule A indicates similarity of coverage but the degree of comparability may in some cases be less at the 4-digit level for identical numbers in the two systems than at the 5-digit level. When a non-SITC number is used as the third, fourth, or fifth digit of a Schedule A number, comparability of coverage with any given SITC classification at the same level ordinarily does not exist, but there usually will be comparability involving combinations of the affected Schedule A or SITC classifications.

The sixth and seventh digits are added to provide more detailed breakdowns where such detail appears to be justified to reflect U.S. import trade characteristics. To this extent the detail shown is determined largely on the magnitude of trade in the various TSUSA commodities arranged within the SITC framework, with the two objectives of providing detailed data for commodities important in the U.S. import trade while also providing data in terms of the SITC outline which are comparable, insofar as possible, with foreign trade statistics compiled by other trading nations.

Section 6

*TSUSA Import
Classifications Correlated
With Schedule A,
Agricultural/Nonagricultural,
and End-Use Codes*

Section 6

This table lists the approximately 10,500 statistical classification numbers in the Tariff Schedules of the United States Annotated (TSUSA), 1978 edition, as amended by Supplements 1 through 3, together with abbreviated commodity descriptions and, as applicable, units of quantity. Also aligned under their respective columns opposite each TSUSA classification are the following additional codes used in defining or grouping TSUSA classifications in terms of the indicated statistical categories:

1. Schedule A number (7-digits) used for rearranging and grouping basic TSUSA import data into Schedule A, SITC-Based Classification of Commodities Imported into the United States, which is a classification system based on the Standard International Trade Classification (SITC), Revision 2.¹ This commodity data is presented in monthly Report FT 135, U.S. General

Imports, Schedule A Commodity by Country. For a correlation between Schedule A import classifications and TSUSA numbers, see Section 5 of this publication.

2. Agricultural and nonagricultural code (1 digit): "O" indicates agricultural commodities; "1" indicates non-agricultural. (See Section 2 for the guidelines used to classify commodities as "Agricultural.")

3. End-use code (4-digits) used for rearranging and grouping basic TSUSA import data into end-use commodity categories. Tables I-7, I-12, and I-13 of Report FT 990, Highlights of U.S. Export and Import Trade, and Tabulation IM 171, U.S. General Imports of Merchandise, "End-Use" Commodity Categories by Selected Areas or Countries of Origin, use this classification scheme. For a correlation between end-use import classifications and TSUSA numbers, see Section 7 of this publication.

Section 7

This table shows the outline of the end-use classification scheme for recording U.S. import trade data, with the commodity description for each end-use category and the 7-digit Tariff Schedules of the United States Annotated (TSUSA) numbers assigned to each end-use category at the most detailed (4-digit) level. (See Section 6 for abbreviated TSUSA descriptions.)

The classification of U.S. import trade into broad summary commodity categories based on a concept of end-use demand was originated and developed a number of years ago by the Merchandise Trade Branch, Balance of Payments Division, Bureau of Economic Analysis (BEA). It represents a regrouping of the 10,500 individual commodity numbers contained in the basic import commodity classification schedule (TSUSA) into 115 4-digit summary commodity groupings. The 4-digit coding system permits combining of the 115 groupings into broader and broader subcategories at the 3-, 2-, and 1-digit level. At the broadest (1-digit) level, the principal end-use categories of imports emerge as follows:

- 0 Food, feeds, and beverages
- 1 Industrial supplies and materials

- 2 Capital goods, except automotive
- 3 Automotive vehicles, parts, and engines
- 4 Consumer goods (nonfood), except automotive
- 5 Imports, n.s.p.f.

Data for all the 115 import end-use groupings, together with the 3-, 2-, and 1-digit subcategories and categories into which they combine, are presented in tables I-7, I-12, and I-13 of Report FT 990, Highlights of U.S. Export and Import Trade, and in Tabulation IM 171, U.S. General Imports of Merchandise. "End-Use . . ." End-use demand has fundamentally determined the assignment and regrouping of the basic TSUSA import commodity classifications into major summary categories, but within each major grouping there are subdivisions intended to reflect the physical nature of a commodity or its stage of production.

For a more complete description of the end-use system, see "U.S. Merchandise Trade Exports and Imports—1965-1976, Classified by BEA End-Use Categories."

Section 8

This section relates commodity number composition of the selected commodity groupings and commodities described in import commodity summary tables I-2, I-3, I-4, I-9, and I-10 of Report FT 990, Highlights of U.S. Export and Import Trade to the appropriate numbers in Schedule A, SITC-Based Statistical Classification of Commodities Imported into the United States. In general, the data presented in the import commodity-oriented summary tables

include Schedule A section (1-digit) totals, selected division (2-digit), group (3-digit), and subgroup (4-digit) totals, and totals, for leading commodities (7-digit), or combinations of commodities. (See Section 5 for abbreviated Schedule A descriptions.) The data presented in terms of these categories are intended to reflect the current pattern or highlights of U.S. import trade.
